GDPR Risk & Audit and How ISO 27001 can help to achieve the compliance

at Thessaloniki

Mickov Saso

21st JUNE 2019   10:00-17:00   CPE's: **7**

Course Description

ISO 27001 and GDPR are two significant compliance and regulatory topics that have a lot in common. Both of them aim to strengthen data security and mitigate the risk of data breaches, and both of them require organizations to ensure the confidentiality, integrity and availability of data.

ISO 27001 is a set of best practices with a focus on information security providing practical advice on how to protect information and reduce cyber threats. In other hand, the General Data Protection Regulation (GDPR) as a legal framework in Article 24 specifies adherence to codes of conduct and approved certifications, like ISO 27001 in order to achieve data privacy and adequate protection of personal information.

In this regard, this course will explain how ISO 27001 comes in handy: It provides practical guidelines how to develop clear, comprehensive policies and procedures for data protection minimizing the risks that might lead to security incidents and breaches.

Furthermore this course will help you develop a practical framework for internal audit roles in privacy filed as independent assessment of data protection policies and procedures are adequate and whether they are being followed in the practice.

Who should attend?

Internal and external auditors, risk officers, privacy managers, data protection officers, information security officers, IT managers and other professionals involved in an assessment on privacy, information security, data governance, or those wanting to find out more in these emerging areas.

Course Programme

This course will take you through the following learning steps:

- An overview of GDPR as a strategic vision and governance
- Explanation of critical GDPR sections and modules
